Subject: Mirant's Potomac River Generating Plant stack merge proposal

Thank you for providing this opportunity to register my concerns and opposition to Mirant's stack merge proposal.

As a neighbor of the plant, I believe this proposal poses a significant increase in human exposure to unhealthy air. This proposal will allow a significant increase in particulate matter, with few assurances (and even less confidence) that the applicant's measures to offset the increased output will work without creating other unhealthy effects.

The whole premise of increasing particulate output in order to provide healthier air seems preposterous. Please reject this application post-haste.

Thank you,

James H. Nobil, Jr.
